

## Mirror cabinets and mirror cabinets with light

POLARIA mirror cabinets and mirror cabinets with light are made of powder-painted steel and therefore cleaning with normal household detergents is sufficient. Never use scouring powders or liquids for cleaning, as they can damage the product's painted surface. Try the detergent to a small area on the side to see if it is suitable for the surface. Mirrors may be cleaned with glass cleaner. Check the mirror doors and the screws of the hinges fairly regularly. Tighten the screws if needed.

### **IMPORTANT! REMEMBER TO TEST THE RESIDUAL CURRENT DEVICE.**

Make a periodic check on the device with residual current.

- The instructions can be found next to the power socket.

## REPLACING THE FLUORESCENT LAMP AND STARTER

You can replace a failed fluorescent lamp and starter yourself without tools:

- Turn off the power supply to the light
- Carefully press the lower edge of the plastic cover upwards with your thumb, so that the edge comes out of its groove
- Remove the plastic cover
- Grasp the fluorescent lamp/starter, twist the fluorescent lamp/starter and pull it out of its holder
- Press the new fluorescent lamp into the holder, twist until you hear a "click" indicating that the lamp is locked into its place
- Push the lower edge of the light cover into the groove, press the upper edge carefully and push the cover into the upper groove

### **NOTE! ONLY A QUALIFIED ELECTRICIAN MAY REPAIR FAULTY ELECTRICAL EQUIPMENT!**

## POWER SOCKET

Your POLARIA cabinet is equipped with a protected power socket which can also be used for the continuous charging of electrical devices. Electrical devices can be located outside the cabinet, in which case you can route the plug and cable into the cabinet between the mirror and cabinet frame. Loosen the screws on the mirror hinge and carefully move the mirror so that the cable can be routed through the gap. Then return the mirror to its original position and tighten the screws thoroughly. Make sure that the silicon bits at the end of the screws are still intact. Do not store any devices on top of the light.

### **DO NOT TOUCH ELECTRICAL EQUIPMENT IF YOU ARE WET OR STANDING IN WATER!**

## Wash basins

Clean the basins with a general-purpose neutral detergent and appropriate cleaning sponge or brush. Never use abrasive agents or equipment for cleaning the basins. Never allow the product to come into contact with acids, drain cleaners that contain ammonia, hair dyes or chlorine. You can use, for example, the Clean & Shine bathroom cleaner and protector. It is suitable for porcelain and casted marble wash basins and it's available from hardware stores.

## Other products (cleaning, laundry, side, wash basin, extra, medicine and first aid kit cabinets)

Products are made of powder-painted steel and therefore cleaning with normal household detergents is sufficient. Never use scouring powders or liquids for cleaning, as they can damage the product's painted surface. Try the detergent to a small area on the side to see if it is suitable for the surface. Mirrors may be cleaned with glass cleaner.
